Introduction

AI-Powered Game Chatbot

A chatbot designed to enhance gameplay experience

An AI-powered chatbot for Wuthering Waves and Genshin Impact enhances the player experience by offering quick guidance, lore insights, build suggestions, and real-time support. Designed to understand natural player queries, it helps Travelers and Rovers explore vast worlds, optimize their characters, and enjoy smoother, more interactive gameplay.

Problem Statement

Problem 1

Lack of accessible
game-related support
channels

Problem 2

Time-consuming
search for game
information

Problem 3

Difficulty recognizing
user queries
accurately

Problem 4

Fragmented
knowledge across
multiple sources

Project Objectives

Challenge

- Implement a feedback system to improve chatbot responses over time
- Enhance player experience by providing timely hints and tips.

Goals

- Encourage user interaction through engaging chatbot dialogue.
- Assist players in understanding game lore through insightful answers.

Outcomes

- Ensure compatibility of the chatbot across multiple gaming platforms.
- Allow users to quickly find game-related information by categorizing hints.

Significance

- Foster a community around game strategies and lore understanding.
- Utilize AI to enhance the hint system with machine learning techniques.

Literature Review

- LLM-based NPCs enable natural, context-aware conversations, enhancing immersion.
- Procedural AI allows NPC behavior to adapt dynamically to player actions.
- Chatbots in-game engines reduce repetitive interactions and enrich narratives.
- LLM agents assist in quests, world interaction, and collaboration.
- AI chatbots boost engagement and motivation in game-based learning.
- Genshin Impact and Wuthering Waves Fandom Wikis’.

Methodology

1. User Input

- Collects queries from players in natural language.

2. Processing

- Uses Natural Language Processing (NLP) to understand intent.

3. Response Generation

- Generates hints, tips, or step-by-step guidance based on analysis.

4. Feedback Loop

- Collects user feedback to improve future responses.

User Input: Gather user queries.

Processing: Analyze and interpret intent.

Response Generation:
Provide hints based on user input.

Feedback Loop

Incorporate user feedback for improvement.

Implementation

User Interface

- Simple chat interface in-game or via companion app.

Input Processing

- Uses Natural Language Processing (NLP) to interpret player queries.

Knowledge Base

- Stores game data: quest guides, character builds, item locations, and strategies.

Feedback Loop

- Players can rate responses or ask follow-up questions.

Conclusion

- Enhanced Game Experience
- Interactive Learning Tool
- Future Potential
- Technical Challenges Faced

In summary, our game hint chatbot has proven effective. Future enhancements will include:

- **Integration** of advanced AI algorithms
- **Expansion** of game genres supported
- **User feedback** incorporation for continuous improvement
